

# VOTE ADRIAN ABBS

## As your Independent MP

YOUR VOTE MAKES THE DIFFERENCE

### Reading West & Mid Berkshire Needs an Independent MP

## PARTY POLITICS IS NOT WORKING

### IT'S ABOUT YOU

My commitment is to represent **you**.

Not a party and not any vested interest groups.

The constituency office will be well staffed.

**YOU** will be able to get an answer.

I will represent **YOU**.

### YOUR AREA

I have already met with **your** area's Parish and Town Councillor's.

I'm committed to keeping them involved whilst I'm an MP. We need an MP who will reflect your area's needs.

I will represent **YOUR** area.

### THE CONSTITUENCY

Whether you are from our urban areas of Reading West or the more rural environment of Mid Berkshire.

I've committed to ensure we have an MP who is focused on the community not themselves.

I will represent the public and local businesses in the **constituency**.

### Energy.

Addressing our energy cost and security challenges can pave the way to resolving a host of related concerns. This includes alleviating the cost-of-living crisis, ensuring food cost supply stability, improving health outcomes, and revitalising the competitiveness of British industry.

### Farming's Importance.

The rising cost of food and its security pose significant challenges. Increasing dependence on imported goods compromises our autonomy over a basic necessity. I would aim to bolster British agriculture to progress towards self-sufficiency in food production.

### Housing.

Our current planning system is not fit for purpose. We need land value reform and councils to reengage with building what communities need. Land value reform could make houses more affordable to build and buy. Also, quality council homes could be used to ensure key workers get access to accommodation and so retain their skills in the NHS.

### Transportation.

Within 15 years what we need from transport will have completely changed. As all infrastructure projects take decades, we need to be planning and building for the future of transport now.

That means being ready for driverless cars, lorries, cabs etc. Being ready for new fuel types. The UK has proven it can't do big infrastructure. So, let's ensure what we have is fit for purpose and available.

### Your NHS.

We will all use the NHS in our lives. As our population ages its use grows. I believe doctors and nurses are best placed to describe how it should work, and so I want to support keeping the staff it trains and ensure they help shape what we need in the future.

### National Security.

We have all seen the news and the rise of dictators. I believe in a robust and contemporary military, dedicated to safeguarding our interests and serving as an effective deterrent. Collaborating with allied nations enhances our collective security.

### Social Care Funding.

Fundamental change in funding is needed. Local councils have the legal responsibility but not the powers to adequately fund. Therefore, this needs to become the responsibility of Westminster who can deal with the constant variables involved in delivering what's needed.

### Your Vote can Count.

My motive for standing is to ensure there is a viable alternative to party politics. Once elected I can use my business experience to benefit you, the constituency, and the nation. My experience covers from factory work through high tech innovation for small, medium, and large corporates. I've been an entrepreneur for 20-plus years working world-wide. I have a track record of success and getting things done.

### Education.

It is the cornerstone upon which a just and equitable society is built. Universal access to top-tier education is essential. Continued investment in this area is crucial for equipping ourselves with the skills needed for the decades ahead.

### Environment Impact.

Ignoring our environmental footprint will only lead to worsening consequences. Yet, by harnessing an abundance of clean energy, we have the potential to significantly lessen our ecological impact and concurrently achieve financial savings.

### Sewage.

Expecting private Companies, whose motive is shareholder return, to deliver the infrastructure changes needed to stop raw sewage discharges is simply madness. Asking them to monitor themselves is worse. Privatisation of an industry that has no possible competition was a mistake that needs to be fixed.

### The Constituency.

My primary commitment is to represent the constituency's interests in parliament. It is a large new constituency made up of both urban and rural areas. I aim to represent it all and all its residents.

You will see me, during my time as MP, around the constituency undertaking MP surgeries and championing our area.

## Bringing my business career to politics
